EDUCATION

McMaster University

B.Eng, Computer Engineering with Co-op

Hamilton, ON

Sept 2021 – Apr 2026

Relevant Courses: Software Development, Data Structures and Algorithms, Algorithm Design and Analysis, Digital Systems Design, Machine Learning, Artificial Intelligence, Embedded Systems, Operating Systems, Communication Networks

EXPERIENCE

Dev Ops Engineer

Jan. 2026 – Present

Defend · Remote

- Architect and maintain **CI/CD pipelines** using **Docker** and **Kubernetes**, automating deployment workflows to ensure consistent delivery for the 65square platform.
- Engineer automated tooling using **Python** and **Ruby** to streamline root cause analysis and backend integration, improving system stability in production environments.

Automation Developer

Jan. 2026 – Apr. 2026

The Forge · Hamilton

- Prototyped an AI-driven data pipeline to extract and summarize startup metrics into a centralized repository.
- Engineered API integrations to sync processed data with project dashboards and reduce manual workflow updates.

Business Systems Analyst (Engineering Co-op)

May 2024 – Jan. 2026

Vale Base Metals · Toronto

- Engineered a metadata rationalization project during a corporate spin-off, reducing the active document repository from **500 to 222 documents (56% reduction)** while mapping new **VBM-specific categories** to ensure **100% data integrity**.
- Developed a **PowerApps** request portal and **Power BI** dashboard to automate helpdesk analytics, enabling real-time tracking of resolution times and closure rates for **100+ monthly requests**.
- Architected structured Excel models using **VBA, pivot tables, and slicers** to synthesize complex feedback from **15+ C-level executives** for value chain workshops.
- Orchestrated a major system upgrade from **SISPAV 2.1.9 to 2.2.2**, mapping current-to-future state processes and delivering training materials/FAQs to a user base of 10,000+ employees

Processing Support Specialist

Sept. 2022 – Mar. 2026

Flipp · Toronto

- Supported the migration of **100+ retailers** to a centralized processing support inbox, reducing back-and-forth communication between retailers and operations teams using tools including **ClickUp** and **Jira**.
- Managed end-to-end promotional flyer processing, from asset uploads to final quality checks, ensuring accuracy and presentation quality for user-facing content.
- Troubleshooted ambiguous processing and technical issues within internal systems, escalating defects and coordinating resolution across operational workflows.

PROJECTS

ASL Two-Way Communication Glove | Flutter, Dart, Figma, Arduino,

- Developed a capstone gesture recognition system using an Arduino Nano 33 BLE Rev2 and custom KiCad PCB.
- Implemented a 10-dimensional weighted error-comparison algorithm to classify sensor data with under two seconds latency.

RolePrep AI Interview Simulator | Python, React, Streamlit, Plotly, Figma

- Built a bilingual AI interview simulator with adaptive 10-question technical and behavioural interview flows.
- Created a Plotly analytics dashboard to track performance across confidence, communication, technical accuracy, and algorithm choice.

Embedded Real-Time Control System for Autonomous Vehicles | FMUK66, RaspberryPi, FreeRTOS, C/C++

- Developed a FreeRTOS firmware architecture managing 8 concurrent tasks using queues and semaphores.
- Implemented speed compensation and obstacle avoidance logic using accelerometer and ultrasonic sensor feedback.

SKILLS

Languages: Python, C/C++, Java, SQL, HTML/CSS, TypeScript, JavaScript, Dart, Verilog

Frameworks & Tools: React, Flutter, Streamlit, Plotly, PowerApps, Power BI, Git, Linux, Jira, ClickUp, Figma

Systems & Hardware: FreeRTOS, Raspberry Pi, Arduino, BLE, KiCad, Simulink, Quartus, ModelSim, LTSpice

Areas: Data pipelines, embedded systems, API integrations, dashboarding, technical troubleshooting, process improvement
